DEFENSE LIVE SHEET

Jordan Lee

CS.042 Questioning The Universe, Fall
Assessor: _____

TOTAL _____ / 100

Artifact _____ Sprint _____ Record checked: yes / no / NDA live Individual follow-up: yes / no

Tick an item when the student says it.
Every item ticked, none undone by a follow-up question or the record, and no red flag: 20. Any red flag: 4. Otherwise 16 points with one item missing, 12 with two, 8 with more.
Missing, 0: Unexcused no-show, or no meaningful attempt to present or answer; an absence reported to the assessor before the session is rescheduled and not scored here.

1 Ownership and delegation SO2, SO4

E 20 | M 16 · 12 · 8 | D 4 | 0

Asks: walk me through it and where it stands; what, if anything, did you hand to AI tools, what did you keep, and how did you know the result was right? Follow-up: where did you stop to check it yourself, did anything go wrong, and what changed?

- ☐ **Owns it:** authored or drove the work and can say where it stands, matching the repo record
- ☐ **AI account:** says what was and was not handed to AI tools
- ☐ **Specific checks:** names the checks on the work and on anything delegated (tests, CI, review gates, staging, rollback, a held-out evaluation), not just "we had tests"
- ☐ **A stop, or a lesson:** names a point where they stopped to validate something hard to reverse (a schema, authentication, a deployment, a data migration, a data split, a save-file format) and why there, or why nothing in it needed one, or a delegation that went wrong, the check it lacked, and the check now in their sprint notes or repo record

RED FLAGS

- × **No authorship:** cannot say what they authored or drove in the work presented
- × **No AI account:** gives no account at all of what was handed to AI tools
- × **Unexamined:** describes an unchecked hard-to-reverse change and cannot say what check it needed
- × **Contradicted:** makes claims about what they authored, drove, reviewed, or merged that the repo record contradicts

Notes _____

2 Judgment: why this approach, what was rejected, what was hard to reverse SO1

E 20 | M 16 · 12 · 8 | D 4 | 0

Asks: why this way, what else was on the table, and what is hard to reverse? Follow-up: knowing what you know now, what would you change? Where the partner or a teammate made the call: would you have decided the same way?

- ☐ **Why this way:** explains why this approach was chosen, whoever made the decision
- ☐ **Two alternatives:** names at least two (doing nothing counts), each with the reason it was rejected, consistent with the team's recorded decisions (an ADR or RFC) or the sprint notes where they cover it
- ☐ **Hard to reverse:** says which parts of the decision are, or why none are
- ☐ **What they would change:** says what they would change now, or why they would not, including for a decision someone else made

RED FLAGS

- × **No alternative:** names no alternative at all

Notes _____

3 Technical depth: "what breaks if X" SO6

E 20 | M 16 · 12 · 8 | D 4 | 0

Asks: what breaks in the work you presented if X changes, with X picked by the assessor and different for each student? Follow-ups: what if Y changes too, and how do you know?

- ☐ **Correct and specific:** a correct answer that names the behavior or limit that breaks
- ☐ **Holds on a second what-if:** the reasoning holds when Y changes too
- ☐ **Verified it themselves:** says where they verified the system's behavior themselves

RED FLAGS

- × **Wrong or evasive:** an incorrect or evasive answer to X (saying what they don't know is not evasive)
- × **No model of the system:** cannot say at all what the system does when X changes

Notes _____

4 Role, team accountability, and work distribution SO5

E 20 | M 16 · 12 · 8 | D 4 | 0

Asks: what did your role ask of you this term, which decision did you drive to a conclusion, and how did your team decide and split the work? Follow-up, for a sprint from this term that the assessor picks at random: what did you own in that sprint?

- ☐ **What the role required:** says what their role (PM, AI Coordinator, Quality Owner) or ownership area required this term, with a concrete example
- ☐ **A decision chaired:** names a decision they chaired to a conclusion this term that matches the sprint notes (deciding to wait or re-plan counts), or, if their turn is still ahead, when the charter's rotation has them chair
- ☐ **How the team works:** explains how the team made decisions and split the work
- ☐ **The random sprint:** says what they owned in the sprint the assessor picks, or why nothing, matching that sprint's Done or In progress list (blocked work recorded there counts)

RED FLAGS

- × **Role unknown:** cannot say what their role or ownership area required
- × **Who did what:** cannot say at all who did what

Notes _____

5 Communication, both directions SO3

E 20 | M 16 · 12 · 8 | D 4 | 0

Asks: what is the most useful thing you told someone whose work you reviewed, your partner, or your mentor, and what changed? Every other answer in the session counts here too.

- ☐ **Answers what is asked:** including, at the edge of their knowledge, what they don't know and how they would find out
- ☐ **Right level of detail:** answers at a level the assessor does not have to correct or ask to shorten
- ☐ **Something told, and what changed:** names a specific thing they told a reviewee, the partner, or the mentor and what changed because of it (an author's reply or committed revision counts), or what they checked in a review and why it needed no change

RED FLAGS

- × **Bluffs:** claims to know what they do not, instead of saying so
- × **Non-answers:** repeatedly does not answer the question asked
- × **Nothing specific:** names nothing specific at all from a review or from talking with the partner or mentor
